

# Botanical PAPERWORKS

## *Does seed paper really grow?*

Yes! We regularly tests our seed paper to ensure high germination rates. As long as it's planted under a thin layer of soil and gets enough water and sunshine, you'll be able to watch it grow and bloom!

**Here are some customer photos:**

*Seed paper* is a special eco paper made from recycled paper waste that is embedded with seeds. When you plant the paper in soil, the paper will compost away and the seeds will grow. No waste will be left behind.
